

I support RM-10352, with one minor change, the upper limit of the digital/CW sub-band should be 1845. Why have it on an odd Khz. This is only about 21% of the total 160 meter band and should not be an undue restriction on the phone operators who will have more than 3/4 of the band. There is still much ongoing antenna experimentation and weak signal CW communication taking place in the low end of the band, and this part of the band should be reserved to continue this activity.
